

Project Team Responsibilities

Dinesh (Software Engineer)

Core Responsibilities

- Frontend development and UI implementation
- Backend API integration
- Authentication and authorization modules
- Dashboard development
- CRM and property management modules
- Payment and lease management integration
- Maps integration
- Digital signature workflow integration
- Deployment support and environment setup
- Bug fixing and feature implementation
- API testing and integration support

Additional Ownership

- React/Next.js architecture
- FastAPI backend coordination
- AWS ECS deployment support
- Sentry monitoring integration
- CI/CD workflow assistance

Pavan Kalyan – Data Engineer

Core Responsibilities

- Database architecture and schema design
- PostgreSQL management
- Data pipelines and ETL workflows
- Data cleaning and transformation
- KPI and analytics data processing
- Dashboard data optimization
- Multi-tenant data architecture
- Data storage and backup planning

- Query optimization and performance tuning
- AI usage tracking data pipelines

Additional Ownership

- Data warehouse planning
- Reporting data APIs
- Integration data handling
- Cloud database management
- Analytics dataset preparation

Mohit – Data Scientist

Core Responsibilities

- AI model research and development
- Revenue forecasting models
- Payment risk prediction models
- Property price prediction models
- AI analytics and recommendation systems
- OpenAI SDK integration support
- Semantic search implementation
- AI report generation logic
- Business intelligence insights

Additional Ownership

- AI workflow planning
- AI metrics evaluation
- Predictive analytics models
- NLP and chatbot enhancement

Nagendra – Data Scientist

Core Responsibilities

- AI experimentation and model optimization
- Data analysis and feature engineering
- AI chatbot logic and responses
- Recommendation engine development
- Forecast accuracy improvement
- AI performance monitoring
- AI analytics dashboard support
- LLM testing and evaluation
- AI research and scalability planning

Additional Ownership

- LangChain/LlamaIndex evaluation(OPEN AI SDK)
- AI automation workflows
- AI monitoring metrics
- Advanced analytics experimentation

Overall Project Coordination

Shared Responsibilities

- Requirement analysis
- Sprint planning
- Testing and debugging
- Documentation
- Architecture discussions
- Production deployment support
- Performance optimization
- Security and scalability planning

Workflow

- Dinesh handles application development and integrations
- Pavan manages data architecture and analytics pipelines
- Mohit focuses on predictive AI models and analytics
- Nagendra handles AI optimization, chatbot systems, and experimentation
